The Ultimate DIGITAL In-Car Video System

The WatchGuard DV-1 Digital In-Car Video System is the revolutionary digital police in-car video system that records onto rewritable DVD-Video discs that play on regular DVD players. The system records up to eight full hours of high quality digital video on a single, inexpensive DVD disc that can be reused many times.

Direct to DVD-Video - No Transfer Steps!

Most other digital video systems require law enforcement agencies to purchase expensive servers and computer systems to transfer, store and convert video evidence. These systems require multiple transfer steps - from the vehicle to a server, from the server to a media that can be taken into the courtroom.
