

***The first lighting tool designed specifically for hunters. The light projected by this 3-watt LED allows the hunter or outdoor user to observe their surroundings while not disturbing the wildlife in diminished lighting conditions. Available with either red or green LEDs, neither of which is easily observable by most animals, it's ideal for observing animals and objects up to 70 meters away. Additionally, the green LED light is a useful tool for self-defense purposes as the intense green light projected is difficult for humans to look into at night.***

***The Ally PL-3X is a multipurpose, digitally controlled lighting tool complete with a Pocket Clip. This 2-power compact lighting tool provides 50 lumens of light output on HI power (2 hours) for demanding jobs and 12 lumens of light output on LOW power (20 hours) for non-essential duties. On HI power this lighting tool will illuminate objects and targets up to 65 meters away. Great for recreational, outdoor, and general purpose lighting tasks in which the user requires and demands only the best.***

***Night-Ops® has developed a revolutionary new pistol light; The Xiphos™ NT (pronounced Zi-fohs, with a long “i” and long “o”) “NT” (Next Technology), continuing the Night-Ops tradition of naming products after the military tools that changed history. The original Xiphos was a double-edged sword used by the ancient Greeks in battle. It was designed to be used with one hand and is thought by many to be the forerunner of the Roman Gladius. The Night-Ops Xiphos™ NT also has single handed multi-function operation and programming function changes. Additionally, the powerful beam pierces through all adversaries and obstructions in its path. Therefore, the name, “Xiphos™ NT”.***

***An excellent choice for hunters or outdoor users who prefer or only have access to ordinary "AA" batteries. The Sentinel PL1-AA blasts 35 lumens of light at a distance up to 40 meters***

***THE GLADIUS is quite possibly the most innovative handheld tactical illumination tool to arrive on the scene. This is a 6 volt, lithium battery powered, high-output LED, highly water resistant, aluminum bodied, illumination tool designed primarily for handheld use, but robust enough for weapon mounted applications. The Gladius™ is designed from the ground up to be immersed into the realities of close quarter conflict and should significantly enhance the capabilities of those operating in low light environments.***
